

KAMALRAJ S

Software Engineer | Python & Django | Software Development Life Cycle
Chennai, India | +91 8778437808 | kamalraj0653@gmail.com | <https://github.com/KAMALRAJ-S>
<https://www.linkedin.com/in/kamalraj2003> | <https://kamalraj-s.github.io/Kamalraj-Portfolio/>

PROFESSIONAL SUMMARY

Software engineer with 1 year of enterprise apprenticeship experience building backend automation, workflow, and AI-enabled tooling using Power Automate, Microsoft Copilot Studio, and AWS. Built an internal report-conversion utility (with GitHub Copilot assistance) that automated roughly 60-70% of a manual reporting-format migration, and configured a Copilot Studio agent with a document-based knowledge base for internal employee self-service. Trained in full-stack Python development (Python, Django, REST APIs, SQL, JavaScript) and now focused on building a career as a Python developer, combining that foundation with hands-on exposure to cloud services, REST integration, and Agile delivery gained on enterprise projects.

TECHNICAL SKILLS

Programming Languages: Python, C#, JavaScript

Backend & APIs: Python, Django, REST API design & integration, OOP & design patterns, .NET (working exposure)

AI & Automation: Microsoft Copilot Studio (AI agent configuration & knowledge-base integration), Power Automate (workflow automation), GitHub Copilot-assisted development

Cloud: AWS (EC2, S3, Lambda) — applied through enterprise project integration

Frontend: HTML5, CSS3, JavaScript

Databases: MySQL, SQL Server, relational data modeling

Reporting Tools: SAP Crystal Reports, Power BI Report Builder (Paginated Reports), XML-based report structures

Tools & Practices: Git, GitHub, Microsoft Office, Excel-based data workflows, Agile/Scrum

Operating Systems: Windows, Linux

PROFESSIONAL EXPERIENCE

Software Engineer — Apprentice

JUL 2025 – JUN 2026

Equiniti India (GCC) — UK FinTech, Share Registration & Financial Services

- Built an automation tool, developed with GitHub Copilot assistance, that read protected SAP Crystal Report files via SAP runtime parameters and converted them to XML for use in Power BI Report Builder (Paginated Reports) — reducing what was previously a 3-5 hour manual conversion per simple report.
- Used the automation tool together with manual rework to convert 80 SAP Crystal Reports spanning simple, medium, and complex categories into Power BI Paginated Report format.
- Configured and deployed a Microsoft Copilot Studio AI agent — writing behavioral instructions, selecting the underlying model, and integrating a knowledge base by connecting a curated OneDrive document library — enabling employees to query application information conversationally.
- Gained hands-on exposure to cloud-native front-end architecture on a React single-page application integrated with a headless CMS, with requests routed through AWS API Gateway and AWS Lambda supporting serverless communication.

UI/UX Design Intern

FEB 2024 – MAR 2024

KNILA IT Solutions, Coimbatore

Designed wireframes and high-fidelity prototypes in Figma for web and mobile applications, collaborating cross-functionally to gather requirements and iterate on interface designs.

PROJECTS

Diabetic Retinopathy Prognosis System / Python, CNN, TensorFlow, Pandas

Academic project applying a CNN-based deep learning model in Python to classify stages of diabetic retinopathy from retinal images.

Personal Portfolio Website / HTML5, CSS3, JavaScript, Responsive Design

Built a fully responsive, cross-browser portfolio using semantic HTML5, CSS Grid/Flexbox, and vanilla JavaScript.

EDUCATION

B.E. — Computer Science & Engineering

2020 – 2024

K. Ramakrishnan College of Technology, Tamil Nadu

CERTIFICATIONS

Python Full Stack Development & Web Technology — QSPIDERS (Python, Django, SQL, HTML5, CSS3, JavaScript)
